EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science & Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Frontend**: TypeScript, React, React Hooks, State Management, JavaScript (ES6+), HTML5, CSS3, Responsive Design, Component-Based Architecture, UI/UX Design, Accessibility Standards
- **Backend**: Python, Go, REST APIs, API Design, Authentication, MVC Architecture
- **Cloud**: Docker, CI/CD, Linux, Cloud Infrastructure (AWS/GCP), Deployment Pipelines
- **Databases**: MySQL, Redis, Storage Solutions, Indexing, Query Optimization
- **Systems**: Data Structures, Algorithms, System Design Patterns, APIs, Scalability, Performance Optimization, Distributed Systems
- **Engineering**: Full-Stack Development, End-to-End Ownership, Cross-Functional Collaboration, Rapid Experimentation

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized distributed Python pipelines processing 50,000+ daily records, reducing latency 30% in production.
- Redesigned REST APIs enabling seamless frontend integration, improving scalability and response times by 25%.
- Improved distributed cloud reliability by implementing structured monitoring, logging, and optimized deployment workflows.
- Collaborated with engineering and product teams to deliver cloud-ready infrastructure solutions.
- Deployed Docker-based CI/CD workflows ensuring stable releases and rapid experimentation cycles.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built React TypeScript frontend using hooks, state management, and API integrations for scalable web applications.
- Designed intuitive UI/UX interfaces, applied responsive design and improved user engagement by 18%.
- Integrated AI-driven retrieval pipelines improving contextual recommendations accuracy by 22%.
- Optimized frontend performance, API calls, and caching reducing latency under concurrent user workloads.

Rails TODO App | LINK — **September 24- November 2024**

- Built responsive component-based frontend architecture following accessibility standards, optimizing web performance.
- Designed responsive user interfaces emphasizing clean UI/UX design and accessibility principles.
- Optimized database queries, indexing strategies, and storage layers improving performance 20%.
- Owned end-to-end frontend features, integrating APIs and optimizing load time by 25%.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed scalable backend APIs delivering automated analytics to enterprise users daily.
- Engineered distributed ETL workflows using Python and SQL optimizing data pipelines.
- Implemented cross-functional integrations improving product reliability and internal team workflows.
- Applied system design patterns ensuring high-performance, scalable infrastructure under load.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed scalable inference pipeline leveraging optimized data structures and algorithms.
- Reduced computational latency 20% through performance optimization and parallel processing.
- Applied systematic benchmarking and validation ensuring reliability across experimental workflows.
- Documented architecture and reproducible experimentation aligning with software engineering standards.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Learned transformer architectures, AI-first development, and scalable API integrations.
- Built production-ready generative applications integrating REST APIs and automation pipelines.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Strengthened backend development fundamentals including algorithms, object-oriented design, multithreading.
- Applied performance optimization techniques improving scalability across cloud-based applications.
