EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, Go, Rust, Solidity, SQL, Git, Linux, Unix
- **Data**: Data Modeling, ETL Pipelines, Data Transformation, Data Validation, Large Dataset Analysis
- **Blockchain**: Distributed Systems, Smart Contract Development, Applied Cryptography, Mechanism Design, DeFi Platforms
- **Development**: REST APIs, Docker, CI/CD
- **Methodologies**: Agile Development, SDLC, Cross-Functional Collaboration, Analytical Reasoning, Research & Literature Analysis

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python ETL pipelines processing 50,000+ daily records, redesigned queues, improving analytics reliability.
- Engineered SQL schemas and indexing strategies, reducing query latency and enhancing backend performance.
- Developed automated data validation scripts ensuring dataset integrity and correctness across ML workflows.
- Collaborated with cross-functional teams to deploy scalable, cloud-ready solutions aligned with Agile and SDLC practices.
- Implemented Docker-based CI/CD pipelines with structured logging, ensuring stable production deployments.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built scalable backend recommender system using Python, SQL, and REST APIs for personalized product recommendations.
- Integrated Large Language Models (LLMs) to improve contextual intelligence and automation workflows.
- Implemented Docker-based CI/CD pipelines improving response times, deployment efficiency, and production reliability.
- Designed modular API testing scripts and validation checks for consistent and reliable production releases.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full-stack task management application using Ruby on Rails MVC with responsive SCSS UI.
- Implemented dynamic CRUD operations, authentication workflows, caching mechanisms, and database validation processes.
- Optimized query performance and maintainability through structured testing and modular code practices.
- Ensured scalability, accessibility compliance, and clean, modular architecture across the application.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed cloud-based backend analytics platform generating automated financial insights and reports daily.
- Built structured ETL workflows using Python and SQL to process and validate datasets efficiently.
- Implemented REST API automation testing and data validation strategies to ensure accurate results.
- Integrated CI/CD pipelines with Docker, improving response time and system availability significantly.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch-based ensemble deep learning pipeline achieving high accuracy for driver fatigue detection.
- Improved preprocessing efficiency using optimized feature extraction techniques, reducing computation time by 20%.
- Applied experimentation, hyperparameter tuning, and reproducible validation for consistent machine learning performance.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python fundamentals including loops, functions, control flow, and object-oriented programming concepts.
- Applied machine learning algorithms, feature engineering techniques, and model evaluation on real-world datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architecture, prompt engineering, and foundational principles of Large Language Models.
- Built practical generative AI applications for text generation, summarization, and intelligent automation workflows.
