EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science & Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: JavaScript (ES6+), TypeScript, React.js, React Hooks, HTML5, CSS3
- **Frontend Development**: Responsive Design, UI/UX Design, Accessibility Standards, Component-Based Architecture, Modular & Scalable Feature Development, Cross-Browser Compatibility
- **State Management**: React Context, Redux
- **APIs**: REST API Integration, Frontend-Backend Interaction
- **Collaboration**: End-to-End Ownership, Customer-Focused Development, Agile, Rapid Experimentation, Cross-Functional Team Collaboration, Problem-Solving, Customer-Centric Development

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized frontend integration and Python pipelines processing 50,000+ records, reducing latency by 30% reliably.
- Redesigned REST APIs for seamless frontend integration, enhancing scalability and response times by 25%.
- Implemented structured monitoring, logging, and Docker-based CI/CD workflows for stable, rapid production deployments.
- Collaborated with cross-functional teams on cloud infrastructure solutions aligned with SDLC and DevOps practices.
- Improved deployment efficiency by automating validation scripts, error handling, and performance tracking workflows.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built React TypeScript frontend using hooks, state management, and API integrations for scalable web applications.
- Designed modular UI components, enhancing responsiveness, accessibility, and engagement by 18%.
- Integrated AI-driven recommendation pipelines, improving contextual accuracy 22% and enhancing customer impact.
- Optimized frontend performance, caching, and API calls under concurrent workloads, improving load times and reliability.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full-stack task management app with modular, scalable frontend features using Ruby on Rails MVC and SCSS.
- Implemented dynamic CRUD operations, authentication, and caching, improving feature reliability and maintainability.
- Optimized database queries and modular codebase, reducing latency 20% while maintaining scalability and architecture.
- Ensured cross-browser compatibility, accessibility compliance, and seamless frontend-backend integration with REST APIs.

Morning Market Brief | LINK — **June 24- August 2024**

- Built cloud-based backend analytics platform delivering automated financial insights and reports daily.
- Engineered structured ETL workflows using Python and SQL, improving data processing efficiency and validation.
- Implemented REST API integrations and automated frontend testing strategies, ensuring accuracy and reliability.
- Integrated CI/CD pipelines with Docker, improving deployment efficiency, system availability, and team collaboration.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch-based ensemble pipeline achieving high accuracy for driver fatigue detection.
- Optimized feature extraction and preprocessing, reducing computation time by 20% across experimental workflows.
- Applied structured experimentation, hyperparameter tuning, and reproducible validation for consistent performance.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python fundamentals, object-oriented programming, and scalable API integration techniques.
- Applied ML algorithms, feature engineering, and evaluation methods on real-world datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architecture, prompt engineering, and foundational principles of LLMs.
- Built practical generative AI applications for web UI integration, text generation, and automation workflows.
