## EDUCATION

**Lovely Professional University** Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) **July 2022 - May 2026**

## SKILLS SUMMARY

- **Programming**: Python, Java, C/C++, Object-Oriented Programming (OOP), Algorithms, Data Structures, Automation Scripting
- **Web**: REST APIs, MVC Architecture
- **Data**: SQL, Relational Databases, Query Optimization, Distributed Storage Systems
- **Software Development**: Agile, SDLC, Test-Driven Development (TDD), Unit Testing, Problem Solving, Analytical Thinking
- **DevOps**: Docker, CI/CD Pipelines, Cloud Deployment, Linux/Unix, Scalable, Fault-Tolerant Systems
- **Optimization**: Low-Latency Application Optimization, Linear & Nonlinear Optimization Techniques

## WORK EXPERIENCE

**DATA ENGINEER INTERN | flickDONE | LINK** **June 25- August 25**

- Optimized Python pipelines processing 50,000+ daily records, redesigned queue architecture, improving reliability by 30%.
- Engineered SQL schemas and indexing strategies, reducing query latency and improving backend database performance.
- Developed automated validation scripts ensuring data integrity and correctness across all processing workflows.
- Collaborated with cross-functional Amazonians to deploy scalable, cloud-ready solutions using SDLC and DevOps.
- Implemented structured logging and CI/CD automation to ensure stable production deployments and monitoring.

## PROJECTS

**Generative AI Product Recommender System | LINK** **June 25- August 2025**

- Built scalable backend recommender system using Python, SQL, and REST APIs for personalized product recommendations.
- Integrated Large Language Models (LLMs) to enhance contextual intelligence, automation, and recommendation accuracy.
- Implemented Docker-based CI/CD pipelines improving response times, deployment efficiency, and reliability in production.
- Designed modular API testing scripts and validation checks for consistent and reliable production releases.

**Rails TODO App | LINK** **September 24- November 2024**

- Developed full-stack task management application using Ruby on Rails MVC with responsive SCSS UI.
- Implemented dynamic CRUD operations, authentication, caching mechanisms, and database validation processes.
- Optimized query performance and improved maintainability through structured testing and modular code practices.
- Ensured scalability, accessibility compliance, and clean, modular architecture across the application.

**Morning Market Brief | LINK** **June 24- August 2024**

- Developed cloud-based backend analytics platform generating automated financial insights and reports daily.
- Built structured ETL workflows using Python and SQL to process and validate datasets efficiently.
- Implemented REST API automation testing and data validation strategies to ensure accurate results.
- Integrated CI/CD pipelines with Docker, improving response time and system availability significantly.

## RESEARCH AND PUBLICATIONS

**Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025**

- Developed PyTorch-based ensemble deep learning pipeline achieving high accuracy for driver fatigue detection.
- Improved preprocessing efficiency using optimized feature extraction techniques, reducing computation time by 20%.
- Applied hyperparameter tuning and reproducible validation workflows for consistent model performance and accuracy.

## CERTIFICATES

**Python, Data Science & ML (Cipherschools) | CERTIFICATE** **August 2024**

- Mastered Python fundamentals including loops, functions, control flow, and object-oriented programming concepts.
- Applied machine learning algorithms, feature engineering techniques, and model evaluation on real-world datasets.

**Generative AI with LLMs (Coursera) | CERTIFICATE** **March 2024**

- Learned transformer architecture, prompt engineering, and foundational principles of Large Language Models.
- Built practical generative AI applications for text generation, summarization, and intelligent automation workflows.
