EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science & Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, Go, SQL, Java (Foundational), Object-Oriented Programming, JavaScript (Basic)
- **Backend**: REST APIs, API Design, HTTP Request Lifecycle, Backend Services
- **Systems**: Distributed Systems, Scalable Systems, Production Systems, System Reliability
- **Databases**: MySQL, Redis, Query Optimization, Indexing
- **Engineering**: Code Reviews, Technical Design, SDLC, Testing, Large Codebases, Safe Production Updates
- **DevOps**: CI/CD, Docker, Git, Production Deployment
- **Collaboration**: Cross-Functional Collaboration, End-to-End Ownership, Problem Solving

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized distributed Python pipelines processing 50,000+ daily records, improving reliability and throughput 30%.
- Redesigned SQL schemas and indexing strategies, reducing query latency by 25% across production systems.
- Developed scalable REST APIs and HTTP services handling high-volume requests across distributed production systems.
- Collaborated cross-functionally on technical design reviews, ensuring scalable systems and reliable production operations.
- Implemented structured logging, monitoring, and CI/CD pipelines, reducing production incidents by 25%.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built scalable backend recommendation engine using Python, SQL, and REST APIs handling high-volume HTTP requests.
- Implemented A/B testing and beta prototypes, improving recommendation accuracy by 22% through data-driven iteration.
- Designed distributed retrieval pipelines with optimized caching, reducing latency by 18% in production.
- Owned project end-to-end, coordinating cross-functional efforts and managing technical milestones for scalable deployment.

Rails TODO App | LINK — **September 24- November 2024**

- Developed Ruby on Rails MVC application with RESTful APIs and structured HTTP request handling.
- Implemented CRUD operations, authentication, Redis caching, and optimized MySQL queries for scalability.
- Conducted structured code reviews within large codebases, ensuring safe production updates and improved system reliability.
- Ensured safe updates to large production systems through testing, CI/CD automation, and deployment validation.

Morning Market Brief | LINK — **June 24- August 2024**

- Engineered AWS-based ETL pipelines processing financial datasets via scalable distributed systems architecture.
- Built backend REST services integrating SQL databases and automated validation workflows.
- Implemented monitoring and structured logging, improving production reliability and availability by 35%.
- Managed end-to-end deployment lifecycle, ensuring scalable systems and stable production releases.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed scalable PyTorch ensemble pipeline optimizing preprocessing for high-performance inference systems.
- Improved classification accuracy by 20% through structured experimentation and hyperparameter tuning workflows.
- Reduced inference latency supporting production-grade deployment requirements and scalable evaluation pipelines.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Strengthened programming fundamentals including data structures, algorithms, and object-oriented system design principles.
- Applied scalable backend architectures and production-ready workflows across real-world machine learning projects.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architectures, distributed inference systems, and scalable API integration techniques.
- Built AI-powered backend services supporting REST APIs and production deployment workflows.
