EDUCATION

Lovely Professional University Jalandhar, India
Bachelor of Technology (Computer Science & Engineering) **July 2022 - July 2026**

SKILLS SUMMARY

- **Languages**: Python, SQL, PySpark, C++, C
- **Data Engineering**: ETL Development, Data Pipelines, Data Modeling, Data Validation, Data Optimization, Large-Scale Data Processing
- **Frameworks**: PyTorch, TensorFlow, Scikit-learn, REST APIs
- **LLM & AI**: Machine Learning, AI Integration, Large Language Models (LLMs), RAG, Model Deployment
- **Cloud & Platforms**: Microsoft Azure, Databricks, Azure DevOps, AWS, Azure Data Services (Fundamentals)
- **Tools**: Pandas, NumPy, Docker, Git, Linux, CI/CD Automation
- **Databases**: PostgreSQL, MySQL, MongoDB
- **Concepts**: Object-Oriented Programming (OOP), Troubleshooting, Analytical Problem Solving, SDLC, DevOps Practices
- **Soft Skills**: Strong Communication, Cross-functional Collaboration, Teamwork, Learning Agility, Organizational Alignment

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK **June 25- August 25**

- Optimized Python and SQL ETL pipelines processing 50,000+ daily records, improving reliability by 30%.
- Engineered PostgreSQL schemas and advanced SQL indexing strategies, reducing query latency by 25%.
- Developed automated data validation scripts ensuring integrity across structured and unstructured datasets.
- Collaborated with cross-functional teams deploying scalable cloud solutions aligned with Azure DevOps practices.
- Implemented Docker-based CI/CD automation and structured logging to stabilize production deployments.

PROJECTS

Generative AI Product Recommender System | LINK **June 25- August 2025**

- Built scalable data engineering pipeline using Python, SQL, and modular OOP architecture.
- Integrated AI and machine learning models within ETL workflows improving recommendation accuracy by 35%.
- Implemented Databricks-style distributed processing concepts using PySpark-based data transformation pipelines.
- Designed optimized data models and validation frameworks ensuring high performance and data integrity.

Rails TODO App | LINK **September 24- November 2024**

- Developed full-stack MVC application integrating SQL-backed persistence and REST API architecture.
- Implemented dynamic CRUD operations, authentication mechanisms, and structured backend validation processes.
- Optimized database queries through indexing and performance tuning, improving response time significantly.
- Maintained modular architecture using Git version control and collaborative SDLC best practices.

Morning Market Brief | LINK **June 24- August 2024**

- Developed cloud-based ETL pipelines using Python and SQL for automated analytics reporting.
- Built structured data ingestion and transformation workflows ensuring scalable large-scale data processing.
- Applied troubleshooting and optimization techniques reducing data processing latency by 20%.
- Integrated Docker and CI/CD pipelines aligned with DevOps and Azure cloud deployment concepts.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch-based machine learning pipeline integrating preprocessing, training, and evaluation workflows.
- Optimized feature engineering and data transformation reducing computational latency by 20%.
- Applied structured experimentation and hyperparameter tuning for reproducible, reliable model performance.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE **August 2024**

- Applied object-oriented programming concepts, SQL integration, and foundational data engineering principles.
- Built machine learning workflows integrating data preprocessing, feature engineering, and evaluation pipelines.

Generative AI with LLMs (Coursera) | CERTIFICATE **March 2024**

- Learned AI integration within data workflows including transformers, embeddings, and pipeline automation.
- Developed practical ML and AI applications demonstrating strong analytical and problem-solving capabilities.
