EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, SQL
- **AI**: Machine Learning, Deep Learning, Generative AI, Computer Vision
- **Libraries**: PyTorch, TensorFlow, OpenCV, scikit-image, Pillow, NumPy, Pandas
- **Data**: Data Processing, Data Pipelines, Data Validation, Feature Engineering
- **Databases**: SQL Queries, Database Schema Design, Vector Database Concepts
- **Backend**: REST APIs, API Integration
- **DevOps**: Docker, CI/CD Pipelines, Cloud Deployment
- **Software Engineering**: Object-Oriented Programming (OOP), Data Structures, Debugging, Scalable Systems, SDLC, Agile
- **Testing**: Unit Testing, Integration Testing, Automated Testing
- **Tools**: Git, Docker
- **Collaboration**: Cross-functional Collaboration, Analytical Thinking, Problem Solving, Technical Documentation, Communication Skills

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized scalable Python data pipelines processing 50,000+ daily records, improving validation accuracy and reliability.
- Designed SQL queries and database schema supporting scalable systems and efficient backend data workflows.
- Developed automated validation scripts and debugging workflows supporting machine learning pipelines and systems.
- Collaborated with cross-functional teams including data scientists delivering scalable AI-powered backend solutions.
- Implemented Docker-based CI/CD pipelines enabling scalable cloud environments and reliable AI deployments.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Developed scalable AI recommendation system using Python, SQL, and REST APIs for personalized recommendations.
- Integrated Generative AI and Large Language Models creating POC solutions demonstrating recommendation capabilities.
- Implemented Docker CI/CD pipelines supporting scalable cloud deployment and efficient AI model integration.
- Designed REST API validation and testing pipelines ensuring reliable machine learning predictions and backend services.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full-stack task management application using Ruby on Rails MVC architecture supporting backend development.
- Implemented REST APIs, authentication mechanisms, and SQL schema ensuring secure backend workflows.
- Optimized debugging workflows and unit testing pipelines improving software reliability and backend system stability.
- Ensured maintainable architecture through modular code design, technical documentation, and structured testing practices.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed cloud-based financial analytics platform generating automated insights using Python data pipelines and SQL.
- Built scalable ETL data pipelines enabling efficient dataset ingestion, validation, and transformation across analytics systems.
- Implemented REST API integration testing and automated validation pipelines ensuring accurate financial data processing.
- Integrated Docker-based CI/CD pipelines enabling scalable cloud deployment and reliable backend system operations.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch-based deep learning ensemble model for computer vision driven driver fatigue detection.
- Optimized preprocessing pipelines using feature extraction and OpenCV techniques reducing model training computation.
- Applied hyperparameter tuning, validation testing, and reproducible machine learning experimentation workflows.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python programming including object-oriented design, debugging, data analysis, and engineering principles.
- Applied machine learning algorithms, feature engineering techniques, and model validation on real-world datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architectures, embeddings, and prompt engineering techniques for generative AI systems.
- Developed practical LLM-based applications for text generation, summarization, and automated intelligent workflows.
