EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, SQL
- **Software Engineering**: Software Testing, Test Case Design, Test Planning, Test Execution, Test Scenarios, Test Environment Setup
- **Quality Assurance**: Defect Tracking, Bug Reporting, Software Validation, Quality Assurance (QA), Test Reporting
- **Testing Methodologies**: Model Based Testing, Functional Testing, Regression Testing, User Acceptance Testing (UAT)
- **Automation**: Test Automation, Automation Scripting, GUI Automation, CI/CD Pipelines
- **Development Practices**: Software Development Life Cycle (SDLC), Agile Development, Scrum
- **Tools**: Git, Docker, Test Management Systems (TMS)
- **Core Computer Science**: Object-Oriented Programming (OOP), Data Structures, Debugging
- **Collaboration**: Cross-functional Collaboration, Stakeholder Communication, Technical Documentation

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python data pipelines processing 50,000+ records daily, improving validation reliability and defect detection.
- Designed SQL validation queries and backend test case design enabling efficient execution and defect tracking.
- Developed automated testing scripts and validation pipelines supporting test execution, defect tracking, quality assurance.
- Collaborated with cross-functional teams using Agile SDLC reviewing requirements and implementing testing workflows.
- Implemented CI/CD dashboards enabling test lifecycle management, status reporting, and reliable deployments.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Developed Python recommendation system using Pandas, NumPy, SQL supporting scalable and testable backend workflows.
- Designed automated test cases validating NLP pipelines and machine learning predictions ensuring reliable outputs.
- Implemented Docker-based CI/CD pipelines enabling automated testing, environment setup, and software validation.
- Developed test scenarios, defect reports, validation logs improving bug detection and quality assurance compliance.

Rails TODO App | LINK — **September 24- November 2024**

- Built Ruby on Rails MVC task management application supporting modular development and testing workflows.
- Developed REST APIs, authentication modules, SQL validation checks ensuring secure access and reliable testing.
- Implemented structured unit testing, debugging processes, defect reporting improving software quality and stability.
- Ensured maintainable architecture through modular code design, documentation, and systematic software testing practices.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed cloud-based financial analytics platform generating automated insights through Python pipelines and SQL.
- Built structured ETL pipelines enabling test case execution, data verification, and consistent financial dataset processing.
- Implemented REST API integration testing and automated validation scripts ensuring reliable and accurate data ingestion.
- Integrated Docker CI/CD pipelines supporting automated test execution, environment setup, repository updates.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch ensemble machine learning pipeline achieving accurate fatigue detection across multimodal datasets.
- Optimized feature extraction pipelines improving preprocessing efficiency and reducing computational training overhead.
- Conducted experiments including hyperparameter tuning, validation testing, and reproducible machine learning evaluation.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Developed strong Python programming skills including object-oriented programming, debugging, structured data analysis.
- Applied machine learning algorithms, feature engineering methods, and validation testing across real-world datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architecture, embeddings, prompt engineering, and principles of Large Language Model systems.
- Developed generative AI prototypes enabling automated text generation, summarization, and intelligent workflow automation.
