EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Java (Core, OOP, Collections, Multithreading), Spring Boot (Basics), JUnit, Python, SQL
- **Backend**: REST APIs, Microservices Architecture, Backend Development, API Design
- **Databases**: PostgreSQL, MySQL, Redis (Basics), Data Modeling, SQL Optimization
- **Cloud**: Google Cloud Platform (GCP), AWS (Fundamentals)
- **DevOps**: Docker, Kubernetes (Basics), CI/CD Pipelines
- **Testing**: Test-Driven Development (TDD), Unit Testing, API Testing
- **Systems**: Distributed Systems, Scalable Systems, System Design, Performance Optimization
- **Data**: ETL Pipelines, Data Processing, Data Validation
- **Domain**: Payment Processing (Conceptual), Fraud Detection (Conceptual), Risk Management (Conceptual)
- **Soft Skills**: Problem Solving, Cross-functional Collaboration, Communication, Ownership, Time Management, Fast-paced Execution

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python ETL pipelines processing 50,000+ daily records, improving scalability and backend performance 35%.
- Engineered SQL data models, indexing strategies, and PostgreSQL optimizations, reducing production query latency 40%.
- Developed RESTful APIs using Java backend principles and validation workflows aligned with microservices architecture.
- Collaborated with cross-functional teams delivering cloud-native backend microservices on GCP environments.
- Implemented Docker-based CI/CD pipelines enabling automated deployments, improving production stability and efficiency.
- Applied backend engineering best practices including API design, microservices architecture, and CI/CD automation.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built scalable backend system using Java-inspired design, REST APIs, SQL, improving performance and accuracy 30%.
- Integrated Large Language Models with feature engineering, improving automation workflows and decision-making.
- Deployed containerized microservices using Docker and CI/CD pipelines, improving backend system reliability.
- Designed API validation and unit testing workflows using JUnit principles and TDD ensuring high-quality releases.

Rails TODO App | LINK — **September 24- November 2024**

- Developed backend application using MVC architecture, implementing scalable REST APIs and modular design.
- Implemented secure CRUD operations, authentication, caching, and optimized SQL queries improving performance.
- Applied structured testing, clean architecture, and maintainable code practices supporting scalable systems.
- Ensured high availability, accessibility compliance, and efficient backend processing aligned with engineering practices.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed backend analytics platform using Python, enabling automated financial insights generation.
- Built scalable ETL pipelines and REST APIs for backend data processing, validation, integration across distributed systems.
- Implemented automated testing and validation workflows ensuring data accuracy and backend reliability.
- Integrated Docker and CI/CD pipelines improving deployment speed, uptime, and cloud-native application performance.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed deep learning pipeline using PyTorch, improving predictive accuracy through optimized architecture.
- Reduced computation time by 20% using optimized preprocessing pipelines and scalable data processing techniques.
- Applied experimentation and hyperparameter tuning, ensuring reproducible and reliable machine learning performance.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python programming, data structures, and backend data processing techniques for scalability.
- Applied machine learning algorithms, feature engineering, and validation techniques for predictive optimization.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architectures, prompt engineering, and scalable backend integration of language models.
- Built generative AI applications supporting automation, API-driven workflows, and backend engineering practices.
