EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, SQL
- **Machine Learning**: Machine Learning, Deep Learning, Model Training, Model Evaluation, Hyperparameter Tuning, Feature Engineering
- **AI Frameworks**: PyTorch, TensorFlow, Scikit-learn
- **Computer Vision**: Computer Vision, CNNs, Image Processing, OpenCV, Pattern Recognition, OCR, Braille Recognition
- **Data**: Data Preprocessing, Dataset Validation, ETL Pipelines, Large Dataset Processing, Data Analysis
- **Backend**: REST APIs, Backend Integration, Scalable System Design
- **DevOps**: Docker, Git, CI/CD Pipelines
- **Cloud**: Cloud Computing Fundamentals (AWS, GCP, Azure)
- **Practices**: Model Optimization, Experiment Tracking, Performance Benchmarking, AI Model Deployment, Technical Documentation
- **Soft Skills**: Analytical Thinking, Problem Solving, Communication, Cross-functional Collaboration, Teamwork

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python ETL pipelines processing large datasets enabling scalable machine learning dataset development.
- Engineered SQL schema optimization and indexing strategies reducing query latency accelerating preprocessing pipelines.
- Developed Python validation scripts ensuring high-quality datasets supporting machine learning training and evaluation.
- Collaborated with cross-functional engineers deploying scalable AI-ready data infrastructure aligned with Agile workflows.
- Implemented Docker CI/CD pipelines and structured logging improving reliability monitoring deployment efficiency.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built scalable recommender backend using Python SQL REST APIs supporting intelligent recommendations.
- Integrated Large Language Models enabling contextual understanding, semantic search, and recommendation optimization.
- Implemented Docker-based CI/CD pipelines enabling scalable AI model deployment cloud SaaS integration.
- Designed modular API testing dataset validation ensuring accurate predictions reliable production pipelines.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full-stack web application using Ruby on Rails MVC architecture with responsive SCSS interface.
- Implemented secure CRUD operations authentication systems optimized database queries improving backend performance.
- Applied structured testing workflows modular design improving application reliability maintainability deployment scalability.
- Ensured accessibility-friendly architecture and clean UI structure supporting scalable integration with AI-driven web platforms.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed cloud-based analytics platform generating automated financial insights through structured Python data pipelines.
- Built ETL workflows using Python and SQL enabling large dataset preprocessing and scalable analytics processing.
- Implemented REST API automation testing and validation ensuring accurate data outputs supporting analytics dashboards.
- Integrated Docker CI/CD pipelines improving deployment speed, system reliability, and automated monitoring.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch deep learning CNN model for visual pattern recognition computer vision.
- Optimized data preprocessing pipelines and feature extraction reducing computation time by twenty percent.
- Applied hyperparameter tuning and model evaluation ensuring reproducible machine learning performance.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python programming including object-oriented design data preprocessing machine learning algorithms.
- Applied supervised learning algorithms, feature engineering, and model evaluation techniques across real-world datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architectures prompt engineering techniques Large Language Model fundamentals AI automation.
- Built generative AI workflows enabling automated text generation summarization intelligent content processing.
