EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, Java, JavaScript, TypeScript, Object-Oriented Programming (OOP)
- **Automation**: Python Automation Scripts, Process Automation, Workflow Automation, Scripting
- **DevOps**: CI/CD Pipelines, YAML, Azure DevOps, Jenkins, Docker
- **Integration**: REST APIs, API Integration, Software Integration
- **Data**: SQL, MySQL, Data Pipelines, Data Validation
- **Cloud**: AWS, Microsoft Azure, Cloud Deployment
- **Artifact Management**: JFrog Artifactory, Artifact Storage, Versioning, Release Management
- **Engineering Practices**: SDLC, Agile Methodology, Version Control (Git), Unit Testing, Integration Testing
- **Documentation**: Technical Documentation, Process Documentation, User Guides
- **Soft Skills**: Problem Solving, Cross-Functional Collaboration, Communication, Continuous Learning

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python automation pipelines processing 50,000+ daily records, improving reliability and workflow efficiency.
- Engineered SQL schema improvements and indexing strategies reducing query latency and backend bottlenecks.
- Developed automated Python validation scripts ensuring data integrity across API integrations and processing pipelines.
- Collaborated with cross-functional engineering teams delivering scalable cloud solutions following Agile SDLC and DevOps.
- Implemented CI/CD automation pipelines with artifact management and logging ensuring stable deployments.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built scalable backend recommender platform using Python automation, SQL pipelines, and REST APIs.
- Integrated Large Language Models enhancing contextual intelligence and automating recommendation workflows for users.
- Implemented Docker-based CI/CD pipelines improving deployment speed, release reliability, and workflow efficiency.
- Designed modular API integration, testing, and validation automation scripts ensuring consistent releases.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full-stack task management application using Ruby on Rails MVC architecture and responsive interface.
- Implemented CRUD services, authentication layers, caching mechanisms improving application reliability and performance.
- Optimized database queries improving performance and maintainability using structured testing and modular coding practices.
- Ensured scalable architecture and clean development workflows supporting reliable application lifecycle management.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed cloud-based analytics platform generating automated financial insights through scalable Python pipelines.
- Built ETL automation workflows using Python and SQL improving ingestion, transformation, and validation reliability.
- Implemented REST API automation testing ensuring accurate financial data integration and reliable reporting pipelines.
- Integrated Docker CI/CD pipelines enabling automated deployments and improving platform stability and release cycles.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch ensemble deep learning pipeline detecting driver fatigue across diverse driving datasets.
- Improved preprocessing efficiency using optimized feature extraction techniques reducing model computation time.
- Applied structured experimentation, hyperparameter tuning, validation workflows ensuring consistent model performance.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python scripting fundamentals, automation workflows, and object-oriented programming principles.
- Applied machine learning algorithms, feature engineering techniques, and evaluation workflows across real-world datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architecture, prompt engineering techniques, and core principles powering modern language models.
- Built generative AI applications enabling automated text generation, summarization, and intelligent workflow automation.
