EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, SQL, Object-Oriented Programming (OOP)
- **Algorithms**: Data Structures, Algorithms, Graph Algorithms, Optimization Algorithms, Algorithmic Complexity Analysis
- **Backend**: Backend Systems, REST APIs, API Development, Async Workflows, Routing Systems, System Design
- **Machine Learning**: Machine Learning Pipelines, Inference Workflows, Large Language Models (LLMs), Embeddings, Scoring Systems
- **Data Engineering**: Data Pipelines, ETL Pipelines, Data Processing, Data Transformation, Data Validation
- **Databases**: Relational Databases, SQL Databases, **PostgreSQL**, Query Optimization, Indexing Strategies
- **Infrastructure**: Docker, CI/CD Pipelines, Git Version Control, Debugging Workflows
- **Development**: Agile Development, Software Development Life Cycle (SDLC), Modular Architecture, Technical Documentation
- **Collaboration**: Problem Solving, Analytical Reasoning, Cross-Functional Collaboration

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python ETL pipelines processing 50,000+ daily records, improving reliability and analytics performance.
- Optimized relational SQL schemas and indexing strategies reducing system latency across data pipelines.
- Developed automated validation workflows transforming noisy signals into structured datasets supporting ML pipelines.
- Collaborated across engineering teams using Agile cycles delivering scalable backend APIs and infrastructure.
- Implemented Docker containers, Git workflows, and CI/CD pipelines ensuring stable deployments and debugging.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Developed Python backend recommender implementing ranking and matching algorithms with scoring logic.
- Integrated Large Language Models with retrieval pipelines improving relevance scoring, embeddings generation workflows.
- Designed scalable data pipelines and REST APIs supporting machine learning inference workflows systems.
- Implemented Docker based CI/CD pipelines improving reliability, scalability, and backend system performance.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full stack task management platform using Ruby on Rails MVC architecture and relational database systems.
- Implemented CRUD APIs, authentication workflows, backend routing logic, and asynchronous request handling systems.
- Optimized database queries through indexing strategies reducing response latency improving backend performance.
- Ensured maintainable architecture using modular coding practices, Git version control, and Agile development workflows.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed backend analytics platform generating automated financial insights using Python pipelines and ETL.
- Built scalable ETL pipelines transforming noisy datasets into structured signals for machine learning.
- Implemented REST API automation testing and validation ensuring accurate data ingestion and reliable backend services.
- Integrated Docker containers and CI/CD pipelines improving system scalability, deployment efficiency, reliability.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch deep learning pipeline leveraging neural networks for real-time fatigue detection.
- Optimized preprocessing pipelines and feature extraction algorithms reducing inference latency by 20%.
- Applied experimentation, hyperparameter tuning, reproducible validation workflows ensuring consistent machine learning.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python fundamentals including data structures, control flow, functions, and object oriented programming concepts.
- Applied machine learning algorithms, feature engineering techniques, and evaluation metrics across datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architectures, embeddings, prompt engineering, and principles behind modern Large Language Models.
- Built generative AI applications including semantic search, automated summarization, and intelligent decision workflows.
