EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, SQL
- **Machine Learning**: Predictive Modeling, Supervised Learning, Unsupervised Learning, Model Validation, Feature Engineering, Hyperparameter Tuning, Predictive Analytics
- **Statistical Methods**: A/B Testing, Statistical Analysis, Experimentation
- **Data**: Data Analysis, Preprocessing, ETL Pipelines, Validation, Pipelining, Data-driven Decisions
- **Frameworks**: Scikit-learn, TensorFlow, PyTorch, Pandas
- **Data Platforms**: BigQuery (Basics), Spark (Basics)
- **Model Deployment**: Model Deployment, CI/CD Pipelines, Docker
- **Systems**: REST APIs, Scalable System Design
- **Cloud**: AWS (Fundamentals), GCP (Fundamentals)
- **Domain**: Fraud Detection (Conceptual), Risk Assessment (Conceptual), Pricing Models (Conceptual)
- **Soft Skills**: Problem Solving, Cross-functional Collaboration, Communication, Time Management

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python ETL pipelines processing 50,000+ daily records, improving data pipeline efficiency and scalability by 35%.
- Engineered SQL-based data models and indexing strategies, reducing query latency by 40% for faster analytics processing.
- Developed automated data validation and preprocessing workflows ensuring high-quality datasets for machine learning.
- Collaborated with Product and Engineering teams delivering scalable, data-driven solutions aligned with business goals.
- Implemented Docker CI/CD pipelines enabling reliable model deployment, monitoring, and improved production stability.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built predictive recommendation system using Python, SQL, improving personalization accuracy by 30% effectively.
- Integrated Large Language Models with feature engineering for semantic search and recommendation optimization.
- Deployed scalable machine learning models using Docker and CI/CD pipelines, improving system reliability significantly.
- Designed A/B testing and model validation pipelines ensuring measurable business impact and decision making.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full-stack application using Ruby on Rails MVC architecture delivering scalable backend systems.
- Implemented secure CRUD operations, authentication, and optimized SQL queries improving system reliability.
- Applied structured testing, modular design, and backend optimization enhancing maintainability and scalability effectively.
- Ensured accessibility compliance and clean architecture enabling seamless integration with analytics-driven data platforms.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed data analytics platform using Python enabling automated insights generation supporting business decisions.
- Built scalable ETL pipelines using Python and SQL improving data availability and analysis speed.
- Implemented REST APIs and data validation workflows ensuring accurate analytics outputs and dashboards.
- Integrated Docker CI/CD pipelines improving deployment efficiency, system uptime, and analytics platform performance.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed deep learning predictive model using PyTorch CNN architecture achieving high accuracy detection.
- Optimized feature engineering and preprocessing pipelines reducing computation time by 20% maintaining performance.
- Applied hyperparameter tuning, model validation, and experimentation ensuring reproducible machine learning workflows.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python programming, data analysis, and machine learning algorithms including regression and classification.
- Applied feature engineering, model validation, and statistical analysis improving predictive modeling capabilities significantly.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architectures, prompt engineering, and deep learning fundamentals for scalable AI applications.
- Built generative AI workflows enabling automation, natural language processing, and intelligent product development.
