EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, JavaScript, SQL
- **Software Development**: Full-Stack Development, REST APIs, Object-Oriented Programming, Microservices Architecture
- **AI**: Machine Learning, Large Language Models (LLMs), Retrieval Augmented Generation (RAG), Prompt Engineering, Embeddings
- **Frameworks**: PyTorch, TensorFlow, Ruby on Rails
- **Cloud**: Cloud-Native Development, Containerization, Docker
- **DevOps**: CI/CD Pipelines, Version Control (Git), DevOps Practices
- **Databases**: Relational Databases, SQL Database Design, Data Modeling
- **Testing**: Automated Testing, API Testing
- **Security**: Secure Coding Practices
- **Development Practices**: Agile, SDLC, Code Reviews
- **Collaboration**: Cross-Functional Collaboration, Problem Solving, Technical Documentation, Communication

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python data pipelines processing 50,000+ daily records improving machine learning feature reliability.
- Engineered scalable SQL schemas and indexing strategies reducing query latency improving backend retrieval.
- Developed automated validation workflows ensuring structured and unstructured dataset integrity across pipelines.
- Collaborated with cross-functional teams refining user stories within Agile SDLC delivering scalable services.
- Implemented Docker containerization and CI/CD pipelines using Git supporting cloud-native production deployments.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Developed scalable full-stack recommender backend using Python SQL REST APIs enabling personalized recommendations.
- Integrated Large Language Models with retrieval augmented generation pipelines enabling contextual recommendations.
- Implemented Docker containerization and CI/CD pipelines improving reliability and scalability of production AI services.
- Designed automated API testing workflows ensuring secure coding practices and reliable production deployments.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full-stack task management application using Ruby on Rails MVC architecture with responsive interface.
- Implemented CRUD APIs authentication workflows and relational database logic supporting scalable application functionality.
- Optimized relational database queries using indexing strategies improving application responsiveness and performance.
- Ensured maintainable architecture using modular coding practices, Git version control, and Agile collaboration workflows.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed cloud-ready analytics platform generating automated financial insights using Python data pipelines.
- Built ETL workflows using Python and SQL processing datasets supporting analytics and machine learning pipelines.
- Implemented REST API automated testing and monitoring workflows ensuring reliable data ingestion and production stability.
- Integrated Docker containerization and CI/CD pipelines improving deployment efficiency, scalability, and system reliability.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch deep learning ensemble model using audio embeddings improving fatigue detection accuracy.
- Optimized preprocessing pipelines and feature extraction workflows reducing model inference latency by 20%.
- Applied experimentation, hyperparameter tuning, and evaluation workflows ensuring reproducible machine learning results.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python fundamentals including object-oriented programming, data structures, algorithms, and software principles.
- Applied machine learning algorithms, feature engineering, and evaluation metrics to develop predictive analytics models.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architectures, prompt engineering, and LLM APIs enabling development of intelligent AI applications.
- Built generative AI applications for summarization, semantic search, and automated workflow generation tasks.
