EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, Java, C++, Object-Oriented Programming, Data Structures, Algorithms
- **Backend**: Backend Development, REST APIs, Microservices Architecture, System Design, Scalable Backend Systems
- **Search & AI**: Semantic Search, Vector Search, Vector Retrieval, Embeddings, Recommendation Systems, Ranking Systems
- **Data**: SQL, MySQL, Data Pipelines, ETL
- **Infrastructure**: AWS, Distributed Systems, Low-Latency Systems
- **Streaming**: Kafka
- **Caching**: Redis
- **DevOps**: Docker, Kubernetes, CI/CD, Linux
- **Engineering**: Agile, SDLC, Test-Driven Development, Experimentation, A/B Testing
- **Tools**: Git, GitHub, Postman
- **Core**: Problem Solving, Analytical Thinking, Cross-Functional Collaboration, Communication

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python backend pipelines processing 50,000+ candidate records daily improving distributed system reliability.
- Engineered MySQL schema indexing reducing query latency improving scalable semantic search retrieval performance.
- Developed automated data pipelines ensuring candidate attribute embeddings supporting reliable retrieval ranking services.
- Collaborated with engineering teams deploying scalable backend services on AWS following Agile SDLC practices.
- Implemented Docker Kubernetes CI/CD pipelines structured logging monitoring enabling reliable backend deployments.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built scalable recommendation engine using Python REST APIs enabling candidate discovery matching ranking workflows.
- Integrated Large Language Models generating contextual embeddings enabling semantic search and vector retrieval.
- Implemented Docker based CI/CD pipelines enabling scalable cloud deployments improving backend reliability automation.
- Designed modular API testing frameworks monitoring metrics ensuring reliable backend services pipelines.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full-stack task management platform using Ruby on Rails MVC architecture delivering scalable backend APIs.
- Implemented authentication workflows CRUD operations caching Redis improving backend performance reliability.
- Optimized database queries indexing strategies improving application scalability maintainability low latency processing.
- Ensured modular object-oriented architecture improving backend system maintainability scalability and engineering quality.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed cloud-based backend platform generating automated insights through scalable Python microservices APIs.
- Built structured ETL pipelines using Python SQL processing datasets enabling reliable ingestion retrieval.
- Implemented REST API testing automation monitoring frameworks improving backend reliability analytics accuracy.
- Integrated Docker containerization CI/CD pipelines improving AWS deployment scalability reliability backend availability.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch ensemble deep learning pipeline achieving high accuracy for driver fatigue detection tasks.
- Improved preprocessing efficiency using optimized feature extraction reducing computation cost training time.
- Applied experimentation and hyperparameter tuning ensuring reproducible machine learning workflows.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python programming algorithms data structures functions loops and object oriented programming fundamentals.
- Applied machine learning algorithms feature engineering model evaluation techniques on real-world datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architectures embeddings prompt engineering and scalable generative AI system design principles.
- Built generative AI applications enabling automation text generation summarization and intelligent recommendation workflows.
