EDUCATION

Lovely Professional University Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, SQL, Java
- **DeepLearning**: PyTorch, TensorFlow, Keras, CNNs, Supervised Learning, Unsupervised Learning
- **ComputerVision**: Object Detection, Image Tracking, Video Tracking, OCR Detection, Activity Recognition
- **Data**: ETL Pipelines, Data Preprocessing, Dataset Annotation, Feature Engineering, Data Validation
- **Deployment**: Docker, CI/CD Pipelines, Git, Version Control, Raspberry Pi, NVIDIA Jetson
- **Testing**: REST API Testing, Regression Testing, Model Performance Benchmarking, Structured Experimentation
- **Tools**: IDEs (VS Code, PyCharm)
- **Methodologies**: Agile, SDLC, Technical Documentation

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK **June 25- August 25**

- Optimized Python ETL pipelines processing 50,000+ records daily, improving validation workflows reliability by 30%.
- Engineered SQL schema improvements and indexing, reducing query latency and enhancing backend performance.
- Developed automated validation scripts ensuring data integrity, preprocessing accuracy, and correctness across workflows.
- Collaborated with cross-functional teams to deploy scalable, cloud-ready solutions aligned with SDLC and Agile practices.
- Implemented structured logging, Docker deployments, and CI/CD automation ensuring stable production performance.

PROJECTS

Generative AI Product Recommender System | LINK **June 25- August 2025**

- Built scalable backend recommender system using Python, SQL, and REST APIs for personalized product recommendations.
- Integrated Large Language Models (LLMs) to improve contextual intelligence and automation workflows.
- Implemented Docker-based CI/CD pipelines improving deployment efficiency, reliability, and system response times.
- Designed modular API testing scripts and validation checks ensuring consistent, reproducible, and production-ready releases.

Rails TODO App | LINK **September 24- November 2024**

- Developed full-stack task management application using Ruby on Rails MVC with responsive SCSS UI.
- Implemented dynamic CRUD operations, authentication, caching, and structured database validation processes.
- Optimized query performance and maintainability through modular code practices and structured unit testing.
- Ensured accessibility compliance, scalability, and clean architecture across application modules.

Morning Market Brief | LINK **June 24- August 2024**

- Developed cloud-based backend analytics platform generating automated financial insights and reports daily.
- Built structured ETL workflows using Python and SQL to process, clean, and validate datasets efficiently.
- Implemented REST API automation testing and data validation strategies to ensure accurate, reproducible results.
- Integrated Docker CI/CD pipelines improving deployment reliability, response times, and system availability.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch-based ensemble deep learning pipeline achieving high accuracy for driver fatigue detection.
- Improved preprocessing efficiency using optimized feature extraction techniques, reducing computation time by 20%.
- Applied experimentation, hyperparameter tuning, and reproducible validation for consistent model performance.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE **August 2024**

- Mastered Python fundamentals including loops, functions, control flow, and object-oriented programming concepts.
- Applied machine learning algorithms, feature engineering, and model evaluation on real-world datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE **March 2024**

- Learned transformer architectures, prompt engineering, and foundational principles of Large Language Models.
- Built practical generative AI applications for text generation, summarization, and automation workflows.
