EDUCATION

Lovely Professional University — Jalandhar, India
Bachelor of Technology (Computer Science and Engineering) — **July 2022 - May 2026**

SKILLS SUMMARY

- **Programming**: Python, SQL, Java, Git, Docker, CI/CD
- **Machine Learning**: Supervised Learning, Unsupervised Learning, Feature Engineering, Feature Selection, Recommendation Systems
- **Deep Learning**: CNNs, PyTorch, TensorFlow, Keras, Hyperparameter Tuning, Model Evaluation
- **Natural Language Processing**: NLP, Information Retrieval, Semantic Search
- **Data**: ETL Pipelines, Data Preprocessing, Dataset Annotation, Big Data Handling
- **Computer Vision**: Object Detection, OCR, Video Tracking
- **Methodologies**: Agile, SDLC, Structured Experimentation

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | LINK — **June 25- August 25**

- Optimized Python ETL pipelines processing 50,000+ daily records, improving ML data workflow reliability 30%.
- Engineered SQL schemas and indexing strategies, reducing query latency and improving backend performance.
- Developed automated ML validation scripts ensuring data integrity, feature correctness, and preprocessing accuracy.
- Collaborated with cross-functional teams to deploy scalable cloud-based ML solutions efficiently.
- Implemented structured logging and CI/CD automation to monitor and stabilize ML production pipelines.

PROJECTS

Generative AI Product Recommender System | LINK — **June 25- August 2025**

- Built scalable backend recommender system using Python, SQL, and REST APIs for personalized recommendations.
- Integrated LLMs and machine learning pipelines to enhance contextual intelligence and recommendation accuracy.
- Implemented Docker-based CI/CD pipelines improving response times, deployment efficiency, and reliability in production.
- Designed modular API testing scripts and validation checks for consistent, reliable production-ready ML releases.

Rails TODO App | LINK — **September 24- November 2024**

- Developed full-stack task management application using Ruby on Rails MVC with responsive SCSS UI.
- Implemented dynamic CRUD operations, authentication, caching mechanisms, and database validation processes.
- Optimized query performance and improved maintainability through structured testing and modular code practices.
- Ensured scalability, accessibility compliance, and clean, modular architecture across the application.

Morning Market Brief | LINK — **June 24- August 2024**

- Developed cloud-based backend analytics platform generating automated financial insights and reports daily.
- Built structured ETL and predictive ML workflows using Python and SQL for intelligent systems.
- Implemented REST API automation testing and data validation for machine learning model accuracy.
- Integrated CI/CD pipelines with Docker, improving response time and system availability significantly.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch-based **deep learning and ML ensemble pipeline** achieving high accuracy for driver fatigue detection.
- Improved preprocessing efficiency using optimized feature extraction techniques, reducing computation time by 20%.
- Applied structured experimentation, hyperparameter tuning, and reproducible workflows for consistent ML performance.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | CERTIFICATE — **August 2024**

- Mastered Python fundamentals including loops, functions, control flow, and object-oriented programming concepts.
- Applied machine learning algorithms, feature engineering techniques, and model evaluation on real-world datasets.

Generative AI with LLMs (Coursera) | CERTIFICATE — **March 2024**

- Learned transformer architecture, prompt engineering, and foundational principles of Large Language Models.
- Built practical generative AI applications for text generation, summarization, and intelligent automation workflows.
